SUMMARY

Full-Stack Software Engineer specializing in AI agent development, multi-agent orchestrations, and interactive web platforms. Proficient across TypeScript, React, Node.js, and Python, with hands-on experience building real-time WebRTC systems, vector pipelines, and modern frontend architectures. Strong foundation in Data Structures & Algorithms, combined with technical mentorship experience and national hackathon achievements.

EXPERIENCE

AI Agent Developer Intern

Gravity

August 2026 - Present, Remote

- Orchestrating multi-step AI agent workflows utilizing tool-calling, dynamic prompt routing, and automated decision-making logic.
- Implementing output parsing and strict JSON schema constraints on LLM responses to prevent formatting errors and maintain agent workflow reliability.

PROJECT

Higenbot - Multi-agent 2D Game Generation Platform

github.com/Hollow3k/higenbot

- Built a multi-agent LangGraph pipeline where 4 AI agents (Creative Director, Game Designer, Programmer, QA Tester) collaborate sequentially to generate playable Vanilla Canvas games from a single prompt.
- Implemented real-time WebSocket streaming to deliver agent progress, file generation events, and QA results to the frontend dynamically as they happen.
- Added a chat interface for post-generation edits that modifies game files on request and executes QA validation checks before applying changes.

Shay - AI Integrated Schema Designing Canvas

github.com/Hollow3k/shay

- Created a React Flow canvas for visual table management and automated foreign-key relational mapping.
- Implemented a smart saving system that syncs project data to Supabase only after user activity pauses to minimize unnecessary API calls.
- Built an AI assistant that translates natural language text instructions into live, side-by-side schema drafts for verification.
- Built a multi-dialect SQL exporter supporting PostgreSQL, MySQL, and SQLite.

Pitch Perfect Pitch Platform for AI Investors

github.com/Hollow3k/pitch-perfect

- Developed a web platform for founders to practice pitches against specialized AI investor personas.
- Integrated ElevenLabs WebRTC to achieve sub-500ms voice-to-voice latency, enabling natural, real-time interruptions.
- Engineered prompt guardrails for unique investor personas and specialized questioning styles.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science Engineering

Guru Gobind Singh Indraprastha University • 2028

- Relevant Coursework: Data Structures & Algorithms, Computer Networks, Operating Systems, Object-Oriented Programming (OOPS), Compiler Design.

CBSE

Indraprastha International School • 2024

AWARDS & HONORS

Technical Instructor

Hash Define (The Technical Society of BPIT)

- Actively teaching 20+ students DSA fundamentals.

Hackathons

- Earned an official nomination for the Smart India Hackathon National phase.

Competitive Programming

- Solved 275+ DSA questions across platforms; Max rating 1000+ on Codeforces and 1400 on LeetCode.

SKILLS

Frontend & Frameworks: TypeScript, JavaScript, React.js, Node.js, Express.js, FastAPI, Three.js, Tailwind CSS, React Flow

Databases & Tools: PostgreSQL, MongoDB, Supabase, Chroma DB, Git

AI & Frameworks: LangChain, LangGraph, GenAI, Activepieces, WebRTC, Multi-Agent Workflows

Languages: Python, C++, Java, SQL, HTML/CSS
